Viewport Essentials for IBM Maximo

Viewport Essentials works in two directions. In Viewport's AI-powered portal, teams can call up Maximo asset data and work orders from documents and drawings via smart P&IDs, procedures and manuals. When working in Maximo, users can see which documentation mentions particular assets and view the documents and drawings in the embedded Viewport viewer. This provides a clear overview of all asset information, facilitating decision-making and asset management, and improving operational efficiency among engineers and maintenance staff.
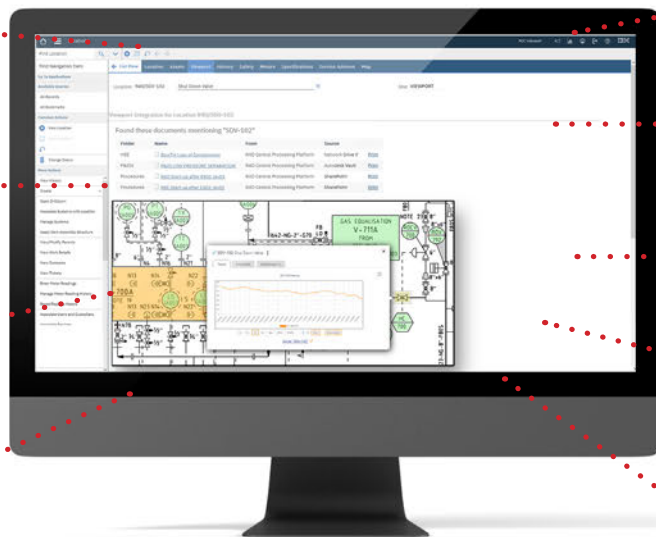

What you get access to:

Uses AI to automatically linklink up-to-date documents to your assets from any source, enhancing safety

Search and OCR capabilities to find information more efficiently

Improve productivity by integrating Maximo information in smart P&IDs

Viewport Essentials works with your existing network drives, SharePoint instances, and other source systems.

Scan QR codes to go directly to required content

Get instant access to live process data, manuals, drawings, and other documents

Preview any type of file on portable devices in the plant

Markup or add annotation to a document or drawing

View all your asset information in one secure and accessible environment

Automatic link discovery

All asset data is automatically analyzed, indexed and linked, making it easier to manage your assets and operations.

Easy access

Instant access to the latest documents and asset records anywhere, so engineers and operators can solve issues quickly.

Single information portal

All P&IDs and other documents from DMSs and network shares are linked and viewable, improving operational efficiency and limiting downtime.

About MACS

MACS are a Systems Integration Consultancy helping asset-intensive industries maximise the value of their assets. For more than 30 years, our digital transformation solutions have enhanced companies globally.

About Viewport.ai

Powered by Radial SG, Viewport is AI-driven software that provides sensible technical information for man and machine. By showing the bigger picture, it enables the making of informed decisions, fast!
